PREFACE

This bibliography series on Information and Communication Technologies in Education (ICTinEd) is issued out twice a year in support of the JFIT-funded ICT in Education Programme in Asia and the Pacific.

Information and materials dealing with ICT on education is growing at a rapid and exponential speed and there is a need to identify what are these and locate where they can be accessed in time for their use in policy making and programme implementation. It is for this reason that the UNESCO Clearing House on ICT for Education has created a bibliographic database of ICT for education materials in order to serve as a clearing house and depository of information produced in the region. From this database, a semi-annual bibliography series will be produced and disseminated both in hard copy and electronic version. The bibliography series is aimed at providing a finding tool to assist ICT projects in the region to locate relevant and useful information that they can use in support of their programme planning, management and implementation. It also offers a quick overview of what information is available in the area of ICT in the collection of the UNESCO Clearing House on ICT for Education. The electronic version of the bibliography series can be accessed at the following URL: http://www.unesco.org/bangkok/education/ict/

It is hoped that as the collection/database further expands, it will reflect more and more the materials that are being generated in the region and this can only be realized with your contributions. Please let us know of materials/publications that you have produced on ICT in education and send us a copy or the necessary bibliographic information so that they can be included in our database and online bibliography.

For obtaining copies of available materials in this bibliography, please send your enquiries or requests to:

New directions: media education worldwide. London: British Film Institute, 1992. 242 p.

The need to education all children to understand and analyze the media critically, and to be able to use media technologies for their own messages, is going to be a crucial issue for schooling in the twenty-first century. This book combine accounts of media education practice, policy and theory from every region of the world. It includes detailed accounts by teachers, researchers, project leaders and media professionals, of their work with children in schools and educational projects. The book provides challenging new formulations of the key issues in media education: training, pedagogy, resources, evaluation and the meaning of literacy.

Aggarwal, Y. P.
Information and communication technologies in educational management: the missing link in developing countries. **Perspectives in Education.** 1999. v. 15: p. 7-25. English.

February 1999 Special issue on Information Technology

Being the largest producer of technical and professional manpower, India is an active participant in the development and use of information and communication technologies (ICTs). Despite this, the education sector is deprived of the benefits of ICTs. The analysis shows that ICTs offer vast potential for their use in educational management. There have been some developments in recent past but the major challenge is yet to be met. It calls for a clear policy perspective, a strategy for the development of ICT-related applications to be followed by a variety of programmes for capacity building at various levels. ICTs will succeed only if the administration is positive and inclined to follow norm based planning and management techniques. While every efforts should be made to promote the use of ICTs, care should be taken that the benefits of these efforts do not remain confined to a few.

Bigum, Chris.
Solutions in search of educational problems: speaking for computers in schools. **Educational Policy.** 1998. v. 12(5): p. 586-601.

Computer use in schools is framed by the beliefs of users about computers and schooling. These

beliefs are reflected in the day-to-day practices in schools and derive from local experience, policy, opinion, and debates about computers, schools, and education. Many discourses that frame computer use in schools are based on a distinction between the human and nonhuman elements of computer use. Each of these discourses attributes essential properties to the computer, thereby broadly determining the role of the computer and consequently of the teacher and learner. Actor network theory avoids the human-nonhuman dualism and makes explicit the negotiations and alliances that are employed in particular groups speaking on behalf of computers in school and provides a basis for moving from essentialist framework toward new possibilities for computers and schools.

De Vaney, Anne.
Will educators ever unmask that determiner, technology?. **Educational Policy.** 1998. v. 12(5): p. 568-585.

Technology enters the classroom today in a whirl of public discourses that valorize or demonize computers and the Internet. Structuring subjectivity in a bipolar fashion, these discourses offer educators only two positions: either proponents or opponents of new technology. Both positions are deterministic and construct similar romantic subjects that exhibit little agency. Because the reach of these opposite stances is so broad, this article interrogates the history and contemporary presence of

the debate. By questioning and comparing subjectivity, the author examines these positions and indicates some rhetorical moves that set the tone for the arguments. Because bipolar discourses often yield overblown arguments and improbable scenarios, they provide little assistance to citizens and educators attempting to understand technology in the schools. The author recommends a more complex sociocultural discussion to guide the use of technology in the schools.

Virtual reality in education. **Perspectives in Education.** 1999. v. 15: p. 45-55. English.

February 1999 Special issue on Information Technology

There is an increasing effort in application of virtual reality in education. In this paper, author reviews the virtual reality application in education in India and abroad. It deals with the concept of reality, the virtual learning environment, virtual library, virtual classrooms and virtual campuses. The author has depended largely upon research and documented literature on virtual reality applications so far as western countries are concerned. He has drawn from the current events and developments in the field so far as Indian experience is concerned.

Improving the information system for planning the quality of primary education: the case of

India. Paris: UNESCO IIEP, 1991. 47 p. (IIEP research and studies programme: increasing and improving the quality of basic education monograph no. 5) English.

Strategies to improve the quality of basic education services cannot be properly designed, monitored and evaluated without an appropriate information system. This monograph reviews the main weaknesses of the database on primary schooling in India and examines the major initiatives that have been taken in recent years to modernize the educational management information system. Some of these are bold and innovative and not likely to provide instant answers, but taken all together, they reveal the design of the system for the future.

The Fifth Programming Cycle of APEID Activities, the Fifth Seminar: Asia and the Pacific Seminar on Educational Technology 1996: Theme: Innovative Approaches to Using Educational Technology for Remedial and Enrichment Education - Focus on Mixed-Ability Multi-Level Classes, Tokyo, Japan, 1-9 October 1996.
Innovative approaches to using educational technology for remedial and enrichment education - focus on mixed-ability multi-level classes. Tokyo: Japanese National Commission for UNESCO, 1997. 79 p. English.

Final report of Asia and the Pacific Seminar on Educational Technology, 1996, General theme of the fifth programming cycle: Towards full utilization of new information technologies and development of in-service teacher training curriculum, Jointly organized by Japanese National Commission for UNESCO, UNESCO PROAP, Japan Council of Educational Technology Centres

This report presents the summary of country papers of Australia, Indonesia, Japan, Malaysia, Nepal, New Zealand, Pakistan, Philippines, Republic of Korea, Thailand and Viet Nam. The participants discussed the trends, issues and proposed recommendations to formulate a regional framework and strategies for future actions in educational technology from 1997 onwards.

Harcourt, Wendy, ed.
Women (a) internet: creating new cultures in cyberspace. London: Zed Books, 1999. 240 p.

The book analyzes the emerging cultural characteristics of women's activities on the Internet across the globe. The first half of the book reflects on the type of cyberculture women are creating including the borders, exclusions and silences they encounter. Part two presents women forging new frontiers, working with the new communication and information technologies in their local and global settings. Throughout, the emphasize is on the dynamism of culture and of communication; the contributors demonstrate how the Internet can be used to empower women to negotiate the global and make it a local space and, conversely, to inform and change global cultures.

The women's guide to the wired world: a user-friendly handbook and resource directory. New York: Feminist Press at the City University of New York, 1997. 307 p.

This guide provides an extensive directory of on-line resources of special interest and use to women. Part 1. offers basic information on using and getting the internet tools: choosing a network and communications software; using e-mail; conversing through Usenet news groups; carrying out research and information transfers; navigating the web; moderating on-line meetings. Part 2. is an annotated directory of over 700 sites in 13 subject areas. Subject areas include: women's organizations in the U.S. and around the world; women's studies and educational programmes; business and finance; health; love and sex; children and parenting; travel and recreation; on-line media; resources for women of colour; resources for lesbians. It completes with a glossary of terms, bibliography and index.

Vibhuti, Nataraj B.
Improving teaching effectiveness in library and information science education. **University News.**
January 13-19, 2003. v. 41(02): pp. 15-18.

The responsibility of the library and Information Science Institutions has become all the more important in the present information technology scenario. The objective of Library and Information Science institutions is not only to produce the librarians with the degree, but it has got the moral responsibility of placing the students in appropriate jobs that they fit in. The failure to place the students in proper jobs is the indication of substandard output. This leads to underemployment and unemployment of Library and Information Science graduates. To assess the effectiveness of the teaching, the best indicator will be how well students are accepted by the job market. A systematic data bank is to be manintained to have the first hand information regarding the students' placement.

Training needs in the use of media for distance education, ed. by Shannon Timmers. Singapore, 1990. 193 p.

In this volume, international and regional media specialists and experts on distance education discuss media applications and identify the most pressing training needs in open learning systems. The report has five sections. The first of these, the Overview contains eleven papers on general aspects of the use of media in distance education. The second part presents Asian Country Report Papers in three sections - South, South East and East Asia. The papers provides the description of how telecommunications technologies are applied for national distance education, the outlines of training requirements and needs, the variety of distance teaching and media development approaches, and the successful teaching system which encompasses the use of virtually all teaching media. The last section contains the Final Report of this AMIC Seminar on training needs in the use of media in distance education in Asia.

Capacity-building on HIV/AIDS preventive education for adult learners through distance education : technical report / organized jointly by the Office of the Chancellor, University of the Philippines Diliman and the UNESCO National Commission of the Philippines (UNACOM) in collaboration with the UNESCO Principal Regional Office for Asia and the Pacific (UNESCO-PROAP). Quezon City: University of the Philippines, 2001. 150 p.

Funded by Japanese-Funds-in-Trust

The technical report is a product of a Seminar Workshop on Capacity-Building on HIV/AIDS Preventive Education for Adult Learners through Distance Education. The objectives of the Workshop were to: identify the best practices in the delivery of preventive education messages for adult learners; formulate guidelines for developing multi-media self-learning materials; and design a regional framework for effective delivery of preventive education messages for adult learners through distance education. The report includes proposed core messages on HIV/AIDS preventive education, guidelines in designing self-learning materials through distance education and strategies and technology used in distance learning.

Dijkstra, Sanne; Collis, Betty; Eseryel, Deniz.
Instructional design for tele-learning. **Journal of Computing in Higher Education.** 1999. v. 10(2): p. 3-18. English.

In any course in instructional design, the design principles should not only be covered in the course itself. Telematics applications of various sorts can bring new dimensions into the instructional design of the course to better illustrate the subject matter. In this article the authors describe the design of a WWW-based course-support environment for a course in instructional design, give an overview of how the environment was used as part of the course experience, and summarize the student evaluation of the course. They call such an augmented learning process a "tele-learning" situation because telematics applications are involved. The authors conclude that such a course-support environment can extend the teaching and learning process, if well designed, by bringing added opportunities for communication and coaching, and by increasing student responsibility. The authors emphasized that such a tool is not meant to replace the instructor, but more to enhance instruction. The design of the environment should reflect this.

McLellan, Hilary.
The Internet as a virtual learning community. **Journal of Computing in Higher Education.** 1998. v. 9(2): p. 92-112. English.

The model of an Internet-based virtual learning community, with students interacting dynamically with the content, the technology, and, most importantly, each other, offers a powerful and convivial approach to providing education at a distance. The classes described here, based on over a year of teaching classes entirely via the Internet, work very effectively as collaborative communities.This paper describes one model for implementing university classes via the Internet using Listservs, electronic mail, and the World Wide Web (WWW). It reports on students feedback concerning this approach to learning. A comparison is made between Internet-based classes and traditional classes taught face-to-face. In addition, the complementary possibilities of asynchronous virtual learning experiences--where students participate in class activities flexibly, at any time of their own choosing--and synchronous on-line activities--where all class members are on-line at the same time in a class-wide interactive forum of discussion, questions and answers, brainstorming, and other activities-are examined.

Information technology in distance instruction. **Perspectives in Education.** 1999. v. 15: p. 57-66. English.

February 1999 Special issue on Information Technology

Open and distance education has spread far and wide during the last three decades of this century. Along with the lateral expansion across the countries, there have been several paradigm shifts in methods of educational delivery. As such over the years, it has sharpened the delivery edge through inducting a multi-channel learning system. Information technology has revolutionized each component of the multi-channel learning system. In this paper, an effort has been made to review the role and impact of information technology on development of print material, audio visual programs, interactive instruction and student evaluation. The author has provided cases and examples to substantiate the propositions vis-a-vis use of information technology in distance education.

Sharma, Darshana P.
Distance higher education in Jammu and Kashmir : inter-institutional collaboration. **University News.** March 17-23, 2003. v. 41(11): pp. 9-13, 16.

The state of Jammu and Kashmir contains large areas, which are mountainous and geographically remote. It is difficult for the students of these areas to join institutions of higher education as regular students because of economic and social backwardness. During the decade of 1970, it was felt that distance education could be a viable alternative to serve the educational needs of the socially and economically weaker people of the remote and inaccessible areas of Jammu and Kashmir.

Srinivas, Ranganayaki.
English education through internet. **Perspectives in Education.** 1999. v. 15(4): p. 229-236, 239.
English.

The concept of a college classroom has begun to change with the advent of internet. Computers are becoming an integral part of the life and education and virtual classrooms are fast becoming a reality. Educators all over the world and in India, especially, are being challenged to rethink and revise their approaches and goals in teaching. In India, teachers and course designers need become aware of the available programmes and find ways of integrating them in their regular courses. A selective list of interesting sites is provided in the paper.The MA (English Language Teaching, ELT) Course offered by H.M. Patel Institute of English Training and Research, they make use of some of the materials available on the internet, though the institute is yet to obtain the internet connection. The paper concludes with a report of the materials available at the Self Access Centre of the Institute.

Secrets of the super searchers: the accumulated wisdom of 23 of the world's top online searchers
. Wilton, CT: Pemberton Press, 1993. 235 p.

This book focuses on the art of online searching. Twenty three of professional searchers who work in

corporate information centers, government agencies, law firms, public libraries, academia, or as proprietors of their own independent research companies are interviewed. The author started each interview with questions about searching background, dealing with clients, keeping track of research projects, formulating their search strategies and tactics, and delivering the results. Thus, it will be useful for librarians and anyone interested in learning the tips, tricks and techniques of effective online searching.

Elliot, Charles.
E-papers in Asia: news flows and computer-mediated press. **Media Asia: an Asian Mass Communication Quarterly.** 1998. v. 25(3): p. 138-146.

The World Wide Web is a major Internet resource providing potentially vast sources of information. One type of information via the Web is news. Newspapers from around the world are available to new audiences and provide access to information in different ways from their hard copy counterparts. How does the potential that exists in these new forms of news transmission affect old problems of news flows? Seven electronically transmitted newspapers, available on the WWW, from different countries across Asia were examined to determine the content, positive/negative emphasis and news source of information presented to a world audience. Results analyzed whether the news via electronic is providing an Asian voice to the world or merely.

Directory of fulltext online resources. Westport, CT: Meckler, 1992. 138 p.

This directory and user's guide provides an overview of online fulltext resources in current state of development. Sections 1-3 discuss fulltext as a shift from citation to publishing, and the two leading commercial services, commercial databanks and CD-ROMs, which are attempting to create the commercial market. Sections 4-10 present seven different types of fulltext now available: some commercial, some academic, some simply public domain. Sections 11-12 discuss implications: some thoughts are presented on the threat of "information overload", and on the enormous efforts now underway to present all this fulltext flood in an organized and useful manner.

Lane, Graham.
Communications for progress: a guide to international e-mail. London, 1990. 152 p.

This guide book gives an extensive introduction and explanation to the new telecommunication technologies that are the features of global information exchange. It provides the final complete introduction to electronic mail systems specifically for the non-commercial sector. Aimed at beginners to the field of computer communications, the book explains in clear, non-technical language all aspects to e-mail, from software and modems to packet switching and e-mail systems. It compares e-mail with fax and telex and shows how it can benefit the work organizations. Explanations are given for all jargon terms such as "modem" or "comms software" that relate especially to e-mail. The information given is applicable to all types of computer hardware and e-mail systems and covers both US and European standards. Glossary of technical terms, step by step guide to getting on-line, contact list of e-mail systems and consultants and reading list are included at the end of the text. This book is an invaluable guide to new fields of computer communications.

Loo, Eric; Beng, Yeap Soon.
Cyber-colonialism in Asia: more imagined than real?. **Media Asia: an Asian Mass Communication Quarterly.** 1998. v. 25(3): p. 130-137.

Political reactions to the assumed cultural hegemonic potentials of the Internet are not new. "Media imperialism" ("cyber-colonialism" in the context of this paper) has been touted as the premise by newly independent states to break out the vicious cycle of being dominated by Western cultural semiotics, consumerism and liberal-democratic political ideas. This paper will address the limitations of the "cyber-colonialism" theory and argue that Asia should respond to the Internet by mustering an "Asian" collective consciousness and getting it heard and represented in cyberspace. It is proposed that Asians have to stake their position and work out new ways for self-expression and representation on the Internet. While this paper recognizes the historical trappings of colonialism and neo-colonialism in the region, it argues that what is needed is a reoreintatins of mindsets for understanding the dynamics of "cultural dominance" and assertions.

Directory of electronic journals, newsletters and academic discussion lists. 6th ed. Washington: Association of Research Libraries, 1996. 1111 p.

This directory is a tool for assisting in locating internet resources as well as assisting librarians in building electronic collections. It is divided into two parts: Part I. covers 1,688 electronic journals, magazines, zines, newsletters, hard-to-characterize types of serials such as digests, reference works, bulletin, and other network hybrids; Part II. covers over 3,000 academic and professional discussion lists. A short description of each title in the directory is included as well as access information. URL is provided for journal and newsletter titles. Included also are ISSN, costs, first issues, peer review, frequency, back issues, and submissions. For the discussion lists, entries include moderate contact information, and indicate whether the lists are edited and archived. A combined index for the two parts includes keyword, title, and institutional affiliation.

Elliott, Charles W.
The Asian online newspaper: a media richness evaluation. **Media Asia: an Asian Mass Communication Quarterly.** 1999. v. 26(3): p. 123-131. English.

With the rapid growth of online newspapers in Asia, it is important to understand what forms this new type of news dissemination take and how well they utilize the potential of this new channel of communication affords. This study uses media richness theory as a framework to assess the way 16 different online newspapers deliver the news and how well the Asian online press is making the opportunities inherent in computer-mediated communication work in the news delivery process. Results indicates that there is a wide diversity of online newspapers across Asia using many different computer-mediated applications in supplying the daily news. In general, however, online newspapers in Asia tend to be electronic versions of a print newspaper rather than a new, distinctly unique way of presenting the news.

Kadhiravan, S.; Balasubramanian, N.
Self-regulated learning and computer-assisted instruction: theoretical issues. **Perspectives in Education.** October, 1998. v. 14(4): p. 207-211.

There has been considerable interest recently in Self-regulated Learning (SRL). SRL is viewed as a process whereby students' activated and sustained cognition, behaviour and affection are systematically oriented towards attainment of their goals. It is expected that in education and training, there is a growing need for every student, teacher and employee to have at least a basic level of computer competence. Therefore, in all areas of education and employment, there have been growing moves toward developing programmes to teach computer skills. It is considered that the instructional strategies, methodologies and psychological principles involved in Computer-assisted Instruction (CAI) are relevant to SRL strategies. The relevance between SRL and CAI has been discussed in this paper.
